

Since 1884, oolitic limestone from our quarry—known as Alabama Stone—has been mined, crafted and shipped worldwide for use in award-winning structures. The superior beauty, durability and economy of Alabama Stone has made it the limestone of choice for architects, designers, builders and artists looking to leave their mark in history.

Since its acquisition by Vetter Stone Company, Alabama Stone's mining, fabrication and administrative operations have undergone major renovations to meet the increasing demand. State-of-the-art estimating, drafting, design and fabrication methods combined with a skilled staff apply modern expertise to an ancient resource.

With Alabama Stone, there are no seasonal delays in production because the limestone is mined underground. This gently veined stone is perfectly suited for dimensional stonework on a grand scale.

a cool and contemporary option

Alabama Stone adds beauty, value and longevity to both traditional and contemporary designs and is today one of the most desirable limestones available. Its natural splendor creates an inviting environment for both commercial and residential markets.

As an oolitic limestone, it is known for its light grey to white background and silver veining. Its machinability allows for versatility and sophisticated detailing. Plus, its reserves are virtually unlimited allowing for matches to existing work for years to come.
